Phosul for Fall Fertility

CONTINUOUS RELEASE PHOSPHATE FERTILIZER

PhoSul™ is plant-available phosphate fertilizer. In the soil, phosphate in rock phosphate is biologically transformed into plant-available phosphate and gypsum. PhoSul offers a more sustainable, efficient and non-polluting manufacturing method for phosphate fertilizer production.

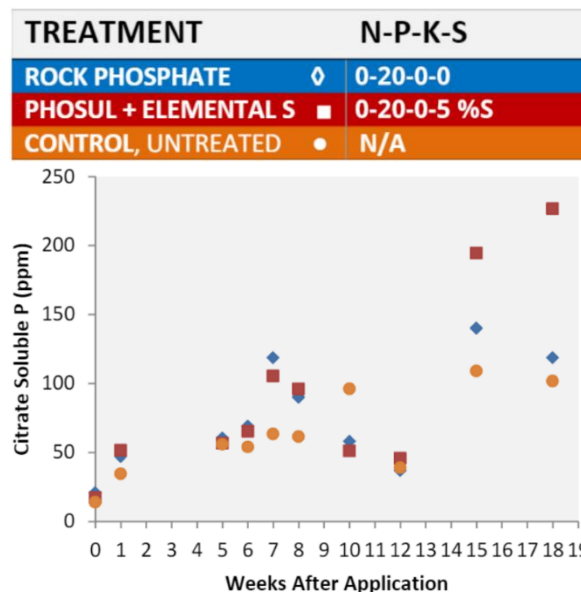

ALFALFA YIELD TRIAL

Compared to a competitor product, Phosul increased alfalfa yields two years after application by 8 tons/acre when applied at 500 lbs/acre in the spring. At \$125/ton, a return of \$821/ac (gain – product cost @500 lbs/ac) makes Phosul a great investment!

MONTANA STATE SOIL RESEARCH

Phosul enhances short and long term phosphate solubility and availability from rock phosphate fertilizer through its blend of soil beneficial ingredients.

PHOSUL IS FORMULATED WITH SILICA

An important soil and plant nutrient

Silica improves plant growth, role in carbon sequestration, improves drought tolerance, maintains cellular membrane integrity, improved antioxidation, increased resistance to diseases and other stresses and much more!
